

Altiris®

Symantec™ Endpoint Protection Integration Component

.....
FACILITATE MIGRATION TO SYMANTEC ENDPOINT PROTECTION

The Symantec™ Endpoint Protection Integration Component helps facilitate migration to Symantec Endpoint Protection clients through robust delivery mechanisms that provide detailed reporting, broad deployment views (dashboards), multicasting technology, and advanced client discovery. This free component can scale for both LAN connected and remote endpoints.

BENEFITS

- > Predefined software delivery tasks
- > Prebuilt upgrade tasks from third-party vendors
- > Initiate scans from the Altiris Console
- > Predefined client health tasks
- > Symantec Endpoint Protection dashboard
- > Role-and-scope-based security
- > Integration with Active Directory

FACILITATING ENDPOINT PROTECTION

The Symantec Endpoint Protection Integration Component is designed to bring power and simplicity to the process of upgrading and deploying your endpoints to the new Symantec Endpoint Protection 11.0 agent. The Integration Component provides easier migrations and installations for mid- and large-sized businesses with integrated operational reporting and management on the Altiris platform. If you're currently using Symantec AntiVirus™ Corporate Edition, Symantec Client Security, Confidence Online™ for Corporate PCs, or Symantec Sygate™ Enterprise Protection, you will want to make the change to the added protection and management simplicity of the new Symantec Endpoint Protection 11.0.

ROLLOUT AND MIGRATION ASSISTANCE

Take advantage of predefined software delivery tasks with the Integration Component, which allows you to utilize robust software delivery mechanisms to control the rollout, upgrade or uninstall of Symantec clients through scheduling and command-line options. You can track delivery status—for example, the number of successful installs or failure—for reporting and streamlined troubleshooting. The Integration Component includes pre-built upgrade tasks from third-party vendors, so you can uninstall agents from other vendors prior to your Symantec Endpoint Protection client installation.

CLIENT HEALTH AND SCANNING TASKS

The Integration Component allows you to initiate scans from the Altiris Console. Operations and help desk technicians can initiate virus and security scans from within the Altiris service desk console as part of routine troubleshooting. The Integration Component includes predefined client health tasks that help ensure the client is functioning correctly. Scanning tasks include repairing virus definitions, and checking and restarting common services.

INTEGRATED REPORTING AND MANAGEMENT

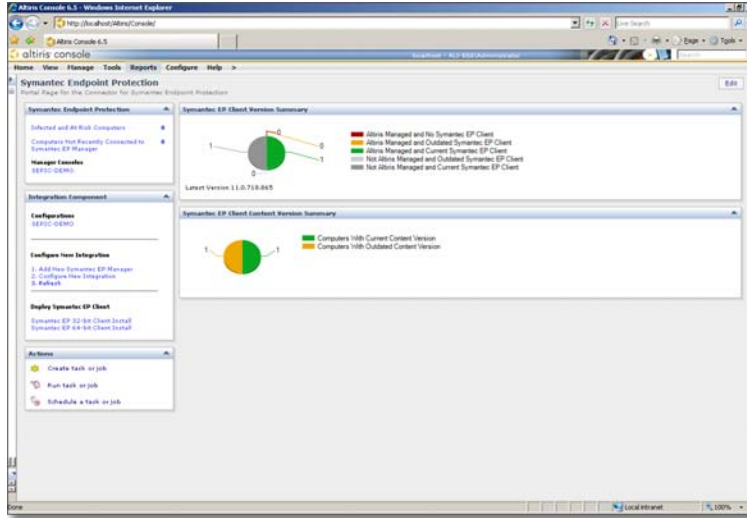

Once you install the Integration Component you can access the power of the Altiris platform, which provides operation reporting on Symantec Endpoint Protection clients and aiding remediation activities. You can quickly view key parameters, such as security content status, client installation status, and infected systems. Dashboards can be customized to combine any information in the Altiris Configuration Management Database (CMDB); for example, patch status, security configuration checks, and so on. The Integration Component helps secure management with role-and-scope-based security. You can assign tasks and console access for administrators and workers or access to specific collections, such as Marketing or Sales. The Integration Component integrates with Active Directory, so you can easily leverage collections based on organizational structure.

CONVERGING SECURITY AND MANAGEMENT

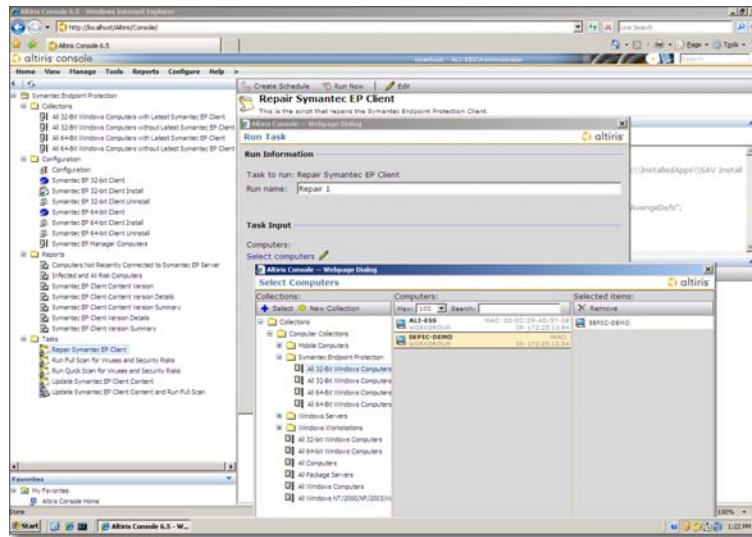

Leveraging Altiris tools can improve the security configuration of your systems, making a well managed endpoint a secure endpoint. Your organization would not only benefit from the convergence of security and management as it relates to security, but from the improved productivity and decreased costs of managing endpoints. Effective client management is key to reducing costs and providing a quality, stable, and secure computing environment. You can add management to compliment security with Altiris® Client Management Suite™ and Software Delivery Suite™ software. Client Management Suite provides comprehensive IT lifecycle management, while Software Delivery Suite provides software distribution, inventory, and patch management. For more information about these and other Altiris products, visit www.altiris.com.

Symantec Endpoint Protection delivers unmatched defense against malware for notebooks, desktops and servers by combining Symantec AntiVirus technology with advanced threat prevention to increase protection and help lower total cost of ownership.

Use Altiris Web reports to help you determine the extent of your client protection. This report shows which clients are infected and which are most at risk

The Integration Component simplifies how you manage your endpoints by utilizing robust software delivery mechanisms.

SYMANTEC ENDPOINT PROTECTION INTEGRATION COMPONENT IS FREE!

SYSTEM REQUIREMENTS

The Symantec Endpoint Protection Integration Component requires that you install and configure the Altiris Notification Server™ version 6.0 SP3 and the Altiris Task Server.

Notification Server Minimum Requirements

- > Processor—Pentium® III 800 MHz or faster
- > Memory—1 GB RAM
- > Hard drive—20 GB
- > Operating system—Windows® Server 2003 or Windows 2000 Server
- > Database—Microsoft® SQL Server 2000 SP3
- > Browser—Microsoft Internet Explorer 6 or later
